### **Claim Rejections - 35 USC § 103**

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

If this application currently names joint inventors, in considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-2, 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over common knowledge in the art or reference US 5493111 and JP 4359855 (cited by the applicant or reference US 6989632.

A photomultiplier comprising an outer casing, a photocathode, an electron multiplier with groove/slot/channel portions and an anode is notoriously known in the art. US reference 5493111 evidences above claimed elements of photomultiplier. Commonly known grooves/channels of electron multiplier do not exemplify protrusions having secondary electron emitting surfaces. However, in the same field of endeavor, JP 4359855 discloses such off-set protrusions for secondary emissions and thus brighter and more enhanced display. US reference 6989632 also evidences such protrusions for the purposes proposed. Thus, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to provide protrusions of JP 4359855 or US 6989632 in the commonly known device for the purpose of multiplying and secondary emissions and thus obtaining enhanced image or display.

### **Allowable Subject Matter**

Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claim 3 would be allowable since prior art of record does not teach the photomultiplier meeting the claimed relationship  $B \geq A/2$  in combination with other features of claim.
